

Law is working. Since its passage, law enforcement officials have stopped hundreds of thousands of felons, fugitives, and stalkers from buying handguns every year. By keeping guns out of the hands of criminals—and putting more police in our communities—we have helped cut the crime rate to its lowest point in a generation. We must now extend the Brady Law's provisions to violent juveniles and bar them from owning guns for life. I call on Congress once again to pass this needed, commonsense legislation.

The President's Radio Address *June 20, 1998*

Good morning. Tomorrow is Father's Day, the day we pay tribute to the irreplaceable role fathers play throughout our children's lives. There is no greater responsibility and no greater reward than raising a child. And for me, no job, not even the Presidency, has been more important.

I want to talk to you today about what we're doing to protect our fathers, our grandfathers, and all men from one of the greatest health threats they face: prostate cancer. This year nearly 200,000 people will be diagnosed with prostate cancer, and 40,000 will die from it. In fact, every year, as many men die from prostate cancer as women die from breast cancer.

For far too long, too little was known about prostate cancer. Too little was said about it out of embarrassment and fear. Because of this, too little was done about it as precious research dollars were spent on other problems.

For 5 years now, we've worked hard to increase public awareness about prostate cancer and to find a cure. Since I first took office, we have increased funding for prostate cancer research at the National Institutes of Health by 100 percent. This year alone we're funding more than 450 critically important research projects on prostate cancer, ranging from prevention to detection to treatment.

Last year scientists at the Human Genome Project and Johns Hopkins University located the first gene known to predispose men to prostate cancer. Prostate cancer is the first disease being studied by the Cancer Genome Anatomy Project, a very exciting new program we recently launched at the National Cancer Institute. We are closing in on this silent killer.

But as far as we've come, we know many questions about prostate cancer remain unanswered. We do not fully understand the role of environmental and dietary factors in prostate cancer. We do not fully understand why the disease progresses at such varying rates in different men. We do not yet know why prostate cancer disproportionately affects African-American men. And we do not yet know how to eliminate the risks of treatment for prostate cancer that discourage too many men from seeing their doctors.

The only way we will ever answer these questions and the only way we will ever beat prostate cancer is by continuing to invest in research. Today I am pleased to announce that the Department of Defense is awarding \$60 million in grants to some of the most promising research projects in the country. These grants will fund innovative new studies to determine the causes of prostate cancer, to develop new methods of prevention and detection, and most of all, to discover groundbreaking new treatments that will save lives.

These grants are an important step in our fight against prostate cancer. But we must press on. This year, as part of the historic legislation to protect our children from tobacco, I proposed to make the largest commitment in history to funding cutting-edge cancer research, a two-thirds increase to the National Cancer Institute. My proposal would also allow people on Medicare to participate in cancer clinical trials. This is especially important for prostate cancer, which overwhelmingly affects men over 65. The more older men are able to participate in these trials, the more we will learn about the disease and the faster we'll be able to find a cure.

But 3 days ago a Republican minority in the Senate bowed to enormous pressure by the tobacco industry and voted to kill this

legislation. They voted against protecting our children from tobacco, against our families, and they voted against increased cancer research and against saving lives. The American people shouldn't stand for it, and I'll keep fighting to reverse it.

This Father's Day, as we celebrate how much our fathers mean to their children, we should also renew our commitment as fathers, as parents, and as Americans to our families by insisting that Congress join together in passing comprehensive tobacco legislation to protect our children, to give us the funds for cancer research, and give us the chance to save more fathers and to strengthen our Nation.

Thanks for listening.

NOTE: The President spoke at 10:06 a.m. from the Oval Office at the White House.

Letter to Congressional Leaders on the Deployment of United States Military Forces for Stabilization of the Balkan Peace Process

June 19, 1998

Dear Mr. Speaker: (Dear Mr. President:)

In my last 6-month report to the Congress I provided further information on the deployment of combat-equipped U.S. Armed Forces to Bosnia and other states in the region in order to participate in and support the North Atlantic Treaty Organization (NATO)-led Stabilization Force (SFOR), which began its mission and assumed authority from the NATO-led Implementation Force (IFOR) on December 20, 1996. I am providing this supplemental report, consistent with the War Powers Resolution, to help ensure that the Congress is kept fully informed on continued U.S. contributions in support of peacekeeping efforts in the former Yugoslavia.

We continue to work in concert with others in the international community to encourage the parties to fulfill their commitments under the Dayton Peace Agreement and to build on the gains achieved over the last 2 years. It remains in the U.S. national interest to help bring peace to Bosnia, both for humanitarian reasons and to halt the dangers the fighting in Bosnia represented to se-

curity and stability in Europe generally. Through American leadership and in conjunction with our NATO allies and other countries, we have seen increasingly rapid progress toward sustainable peace in Bosnia. We have helped foster more cooperative pro-Dayton leadership in Bosnia-Herzegovina, resulting in much improved performance by the parties in fulfilling their responsibilities to implement the Dayton Peace Agreement.

The United Nations Security Council authorized member states to establish the follow-on force in United Nations Security Council Resolution 1088 of December 12, 1996. On June 15, 1998, the Security Council extended the authorization for the SFOR for an additional period terminating June 21, 1999. The mission of SFOR is to deter resumption of hostilities and stabilize the security environment to facilitate the civilian implementation process.

The SFOR has successfully deterred the resumption of hostilities by patrolling the Zone of Separation, inspecting and monitoring heavy weapons cantonment sites, enhancing and supervising Entity Armed Forces (EAF) demining work, and, within existing authorities and capabilities, providing support to international agencies.

The primary way SFOR supports the civilian implementation effort is by contributing to a secure environment. The SFOR works closely with the International Police Task Force (IPTF), which was established on December 21, 1995, under Security Council Resolution 1035. With SFOR support, the IPTF has successfully created indigenous public security capabilities by reforming and training the local police. Both the SFOR and the IPTF, as a result, enhance public security in ways that promote civil implementation of the Peace Agreement. This collective approach works to make the implementation process progressively more self-sustaining without exceeding the SFOR's current level of intensity and involvement.

By contributing to a secure environment, the SFOR has fostered greater progress by civilian implementers, including helping to restore road, rail, and air transportation links, reforming racist and nondemocratic media, and supporting international preparations for
